If you'd like to create AJAX web-based applications easily, then this book is for you. More importantly, it shows you how to do that with joy and feel good about your own work! You don't need to know servlet or JSP while your productivity will be much higher than using servlet or JSP directly. This is possible because we're going to use a library called Wicket that makes complicated stuff simple and elegant. How does it do that? First, it allows the web designer to work on the static contents and design of a page while allowing the developer to work on the dynamic contents of that page without stepping on each other's toes; Second, it allows developers to work with high level concepts such as objects and properties instead of HTTP URLs, query parameters or HTML string values; Third, it comes with powerful components such as calendar, tree and data grid and it allows you to create your own components for reuse in your own project. However, don't take our word for it! This book will quickly walk you through real world use cases to show you how to use Wicket and leave it up to you to judge. Sample chapters are available on the book website at agileskills2.org. This book covers Wicket 1.5.x.
