DESCRIPTION

We are all visual learners, at least in part. We absorb information visually more than in any other way. Yet, visual literacy is mostly missing from mainstream education. So, how can elementary school students visually represent information and ideas to improve their ability to build on what they already know, think critically, and learn meaningfully?

This question is the central theme of *Mind Mapping for Kids*. MMFK offers elementary school teachers a blueprint for how to introduce mind maps in their classrooms to help students think more rigorously and increase engagement by transforming linear, static information into connected, dynamic maps.

Part I of the book discusses the fundamentals of mind mapping for teachers, parents, and students. Part II demonstrates how to use mind maps and the eight reading comprehension strategies to help students develop critical thinking and better comprehend what they're reading. Part III provides 15 examples of mind mapping uses in school and at home and 5 templates to use in the classroom.

Give mind maps a try. They can be used independently or in conjunction with other literacy instruction programs. Either way, they will bring fun and excitement to the classroom while simultaneously improving thinking, reading, and learning.

FREE BONUS

To help you get started with mind maps, each book also comes with a free 1-year license of MindMeister (\$129 value). To get your free download code, e-mail the author with your proof of book purchase and
